

Module 5 – Frontend – HTML5

Question 1: Difference between HTML and HTML5

HTML5 is the updated version of HTML, introducing new features like multimedia (audio, video), semantic tags (like **<header>**, **<footer>**), and better support for web applications. It also reduces the need for external plugins like Flash.

Question 2: What are the additional tags used in HTML5?

Some new tags in HTML5 include:

- **Semantic tags:** **<header>**, **<footer>**, **<article>**, **<section>** for better structure.
- **Multimedia tags:** **<audio>**, **<video>** for embedding media.
- **Input types:** **<input>** types like **date**, **email**, and **range**.
- **Canvas and SVG:** **<canvas>** for drawing graphics and **<svg>** for vector images.
